

TOWER RESCUE KIT

108Q8-500

A versatile high angle rescue kit now featuring the popular OX BLOCK™ and all necessary components to safely perform ground and structure-based rescues as well as self-rescue. Easily adaptable for different rescue situations and techniques needed, while working on lattice towers or other structures. The new and improved Tower Rescue Kit takes our previous rescue kit and replaces the descender with the OX BLOCK™. The previous descender was difficult to use and the Ox Block™ provides end users with a more familiar device to use.

4569PQ6-200 (Qty 1)
