

# BUCKINGHAM SUPERSAVER™

## SuperSaver™ 64-6

The SuperSaver™ was developed in conjunction with Jamie Chambrelli and the team at ArborMaster®. A truly revolutionary patent pending, double hole friction saver and canopy anchor system that will change the way you navigate the canopy forever! Our goal during development was to design a product that would provide you with all the standard adjustable Friction Saver functions. But we also wanted to design in a plethora of other revolutionary functions as well, including the use of both an SRT (Single-Line/Non-Moving Rope System) and a DRT (Double Rope/Moving Rope System) on the same anchor at the same time using one product! The SuperSaver™ offers endless opportunities for new and existing ways to navigate the canopy safely and is the most revolutionary and versatile adjustable friction saver and canopy anchor combination ever seen!

### The SuperSaver™ can be used in many applications here are just a few below:

- Adjustable Friction Saver.
- Multi-Rope System: Two Line Configuration. The use of both SRT & DRT systems in-line and used on a single anchor device.
- Multi-Leg System: Spider legging.
- Numerous SRS anchoring methods.
- Choking Spar Setup.
- Cinching Spar Setup.
- FlintLocker Canopy Anchor: floating anchor device.
- Dedicated Rescue Line: when using Multi-Rope Setup.
- Redirects.
- No-Crash Retrieval.
