

# BUCKARTICULATOR™ Y-HARNESSES

FOR BENDING, REACHING, TWISTING, AND CLIMBING AT HEIGHTS

## BuckArticulator™ Y-Style Harness 69B9DQ5

The BuckArticulator™ was developed while working with FortisAlberta in Canada. Buckingham listened to concerns and worked together to develop a harness ideal for anyone who has to eliminate restriction typically found in traditional harnesses.

The BuckArticulator™ articulates in three places making it ideal for anywhere that requires the user to bend, reach, twist, and climb at heights. The BuckArticulator™ harness floats freely through the

waist straps, while the body belt stays in position allowing for freedom of movement. Perfect for fall arrest, work positioning and rescue. This harness can be used by itself or the user can easily attach a lineman's body belt. 5,000lbs rated nylon loop dorsal attachment that can be used for fall arrest or rescue. Color-coded leg straps with quick connect buckles make doning easy. Leg straps with 4,000lbs rated meet ANSI Z359.11 and ASTM-F887 Arc Flash Requirements.
